

END EXPENSIVE DRILLING ON YOUR NEXT JOB

EVOLUTION™ SERIES POKE-THRU DEVICE PRE-POUR SLEEVE

NO MORE COSTLY, TIME-CONSUMING CORE DRILLING OR CONCRETE REMOVAL

Installation is already hard enough. The last thing you need is additional work with costs that easily add up. With the Evolution™ Series Poke-Thru Device Pre-Pour Sleeve, you can eliminate core drilling and concrete removal from your installation. This saves you from hiring outside teams that stop work on the job site and require extensive setup, drilling and removal.

Save yourself the cost and headache. Simply order the Pre-Pour Sleeves that you need. They install right into decking or plywood before the concrete pour, then remove once completed. You'll get a perfect hole every time without the hassle.

SIMPLE INSTALLATION AND STACKING FEATURES

See how easy it is to install with [this step-by-step article](#) and [learn more about stacking the sleeves](#). The 4" and 10" are stackable, but the 6" and 8" are available in custom heights for deeper concrete pours.

GET STARTED

Use the Evolution™ Series Poke-Thru Device Pre-Pour Sleeve whenever you want to save time and money on the job. For more information, contact your local sales rep and [browse our productivity solutions](#).

TRADITIONAL CORE DRILLING

Requires outside drilling company

Lengthens installation time

Costs up to \$300 per core drill, plus setup and removal charges

Hit or miss holes of different shapes and sizes

Generates dangerous dust on the site

Can run into rebar or trapped bar

Expensive and time-consuming slug removal

PRE-POUR SLEEVE

No drilling required

Saves time

Significantly less expensive

Perfect hole every time

No dangerous dust from concrete drilling

No drilling through rebar or trapped air

No slugs to remove
