

## Evolution™ Series Boxes...now available for walls

Evolution™ Series Wall Boxes are the latest advancement in the most innovative line of pathways in the industry. These wall boxes are designed for new work and old work applications while offering a sleek, clean look that architects will love and the functionality engineers and contractors require. Offered in a 2-gang version with a storage module for active A/V equipment and a 4-gang version when more power, communications, and A/V capacities are required, Evolution Series Wall Boxes are ideal for areas with large or small capacity needs. Evolution Series Wall Boxes are ideal for any area where a flat screen is required, such as: conference rooms, airports, entertainment venues, college campuses, and hospitals.

EFBS4 installed behind a flat screen display.

### FEATURES & BENEFITS

- **New work and old work applications.** Evolution Series Wall Boxes have been designed to be able to be installed in both new work and old work installations. Saving time and money on the jobsite.

- **Removable modules.** Removable modules facilitate quick and easy installations by allowing service feeds to be connected outside the box, increasing jobsite productivity and reducing overall project cost.

- **Storage module.** The 2-gang Evolution Series Wall Box comes complete with a built-in storage module, large enough to hold the smaller receivers, and controllers that are typically found behind flat screen monitors.

- **Available options.** Evolution Series Wall Boxes are available in both a 2-gang and a 4-gang version, allowing for maximum flexibility to fit the capacity needs of the task at hand.

- **Finished cover.** Evolution Series Wall Boxes come complete with a decorative cover option that is field-paintable allowing the product to blend in and match the room decor.

- **Low Profile Cover.** The decorative trim flange and cover are low profile (less than 1/4" from the wall surface) allowing the monitors to seat closer to wall.

## FEATURES & BENEFITS (continued)

- **Built in Tunnel:** The built in tunnel allows services to be wrapped around, increasing flexibility and configurability, while reducing the number of service feeds that need to be brought to the box.

Tunnel

- **Feed Through Capability.** Between the removable modules and the tunneling feature, the Evolution Series Wall Boxes allows for service feeds to be fed through the boxes, reducing the number of feeds required, saving time and money.

- **Accepts standard size wall plates.** Each of the wall boxes are designed to accept standard size (2 3/4" x 4 1/2") [70mm x 114mm] device plates. No proprietary plates means quicker and easier installations.

- **Wiring Capacity:** 3 5/8" [92mm] of space behind the device plate allows for a maximum amount of space for wiring deeper A/V devices.

- **Finished interior.** Fully finished interior removes the unfinished industrial look while increasing visibility, making it easier to see where to plug in devices.

- **Plug-in Capacity.** 4 1/2" [114mm] of space between devices allows the end user to be able to easily plug into the active devices that are across from one another.

- **Multiple size knockouts.** All of the Evolution Series Wall boxes can accept service feeds from 3/4" trade size up to 2" trade size. These knockout plates are removable and interchangeable, providing the most flexibility and configurability options possible.

- **Datacom connectivity options.** Accepts industry standard and proprietary devices from a wide range of manufacturers to provide a seamless and aesthetically pleasing interface for voice, data and video applications at the point-of-use. A wide selection of data and adapter options are available for use with Ortronics® TracJack and Series II devices.

- **UL Listed to U.S. and Canadian safety standards.**

- **Removable Dividers.** Each module is supplied with one divider that can be removed and replaced when needed. Removable dividers allow for maximum configurability.

- **2" x 4" wall cavity.** The Evolution Series Wall Boxes are designed to fit within a standard 2"x 4" [51mm x 102mm] (metal or wood) wall cavity.
